

Alphamune™

In-feed prebiotic containing beta-glucans and mannans.

- Combination of 1-3 and 1-6 beta-glucans and mannans
- Innovative technology for a more stable granule
- Yeast-derived metabolic food components
- Yeast cell wall parts offer good biological availability to the pig

Dosage

- 500 g per tonne of finished feed

Pack Sizes Available

- 1 x 20 kg

Also licensed for Poultry

B-Glucans (1-3, 1-6)

- The most efficient B-Glucans at stimulating an immune response
- Bind to macrophages which are activated and secrete signal molecules (cytokines) which activate other macrophages and lymphocytes
- When in contact with an infection, activated macrophages are stimulated to phagocytose the invading pathogen and continue secretion of more signalling molecules. This further stimulates the tissue macrophages for an a-specific immunity boost and activates T- and B-lymphocytes for a specific immunity boost

Mannans

- Polysaccharide protein complexes originated from the upper layer of *Saccharomyces cerevisiae* cells
- Act as a substrate and energy source for beneficial intestinal flora
- Offer a competitive binding site for certain gram-negative bacteria
- Enhances absorption of nutrients due to thinning of intestinal wall

Alphamune™ G

Contains β -glucans (1-3, 1-6) and mannans. For use as a source of oligosaccharides for animal feed application.

For information about side effects, precautions, warnings and contra-indications, please refer to the product packaging and package leaflet.
