

# CALF PNEUMONIA VACCINE PROGRAMME

## AUTUMN BORN BEEF SUCKLER CALVES

These calves are either born outdoors and housed at a young age or born indoors into a higher risk environment and need a vaccine which can be used early and works fast to provide protection and minimise viral loads in the shed.

### VACCINE PROGRAMME: OPTION 1

**Rispoval® IntraNasal** from 9 days of age provides the earliest protection against **BRSv** and **Pi3v**, with immunity proven to last at least 12 weeks.

**Rispoval®  
IntraNasal**  
RS + Pi3

**12 weeks** protection  
against **BRSv & Pi3v**

### VACCINE PROGRAMME: OPTION 2

**Rispoval® IntraNasal** from 9 days of age provides the earliest protection against **BRSv** and **Pi3v**, with immunity proven to last at least 12 weeks.

For ongoing protection a second dose of **Rispoval® IntraNasal** given 12 weeks after the initial dose will provide a further 12 weeks cover.

**Rispoval®  
IntraNasal**  
RS + Pi3

**12 weeks** protection  
against **BRSv & Pi3v**

+\*

**Rispoval®  
IBR-Marker live**

+  
**12 weeks** further  
protection  
against **BRSv & Pi3v**

+ up to  
6 months  
protection  
against **IBR**

The addition of a single dose of **Rispoval® IBR-Marker live** given to calves over 3 months of age will provide up to 6 months protection against **IBR**.

Zoetis have a comprehensive range of respiratory vaccines allowing the flexibility to select an appropriate vaccination programme based on the needs of each individual farm. Please contact your vet for further details and advice on the most appropriate vaccination programme for your farm.

\*No information is available on the safety and efficacy of concurrent use of Rispoval® IntraNasal with Rispoval® IBR-Marker Live. The decision regarding timing of administration of either vaccine in relation to the other should be made by the prescribing veterinary surgeon on a case by case basis.

**Rispoval® RS+PI3 IntraNasal** contains modified live PI3 virus, strain ts RLB103 and modified live BRSV, strain 375. For the active immunisation of MDA positive or negative calves from 9 days of age against BRSV and PI3 virus, to reduce the mean titre and duration of excretion of both viruses **POM-V**

**Rispoval® IBR-Marker Live** contains attenuated gE negative BHV-1 strain Difivac. For the active immunisation of cattle to reduce the clinical signs of IBR, reduce virus shedding and to reduce BHV-1 associated abortions **POM-V**

Further information is available from the Summary of Product Characteristics or contact your Veterinary Surgeon or Zoetis UK Ltd, 5th Floor, 6 St. Andrew Street, London, EC4A 3AE.
